

## Multiple Computers

iTekLogic allows you to back up multiple computers and mapped drives.

Do you have multiple computers – or even multiple locations – that require regular backup, but don't want to have to manage multiple accounts? Online backup allows you to combine all of your computers and locations into one iTekLogic Business Security Plan. Even mobile computers can be included in the same account as the rest.

iTekLogic also offers solutions for online backup from mapped drives. Only one iTekLogic account is needed when multiple servers are mapped onto one server. This option also allows you to use iTekLogic with computers that have Linux or Mac operating systems, simply by mapping them onto a PC with the iTekLogic software installed.
