

## Additional Plugins

In addition to Microsoft Exchange and Microsoft SQL Server Plugins, iTekLogic offers a variety of plugins to complement our online backup services.

### Microsoft Outlook Plugin

Have you experienced the frustration of losing an important email – or, worse, an important person's contact information? Microsoft Outlook .pst files are difficult to back up because they cannot be copied while they are open. To resolve this problem, iTekLogic created a plugin that automatically closes Outlook and backs up the .pst. The Microsoft Outlook Plugin comes with the iTekLogic Home User software, and can be downloaded for free by business account holders.

### NEW: Microsoft Office Backup Now! Plugin

Some documents are so important that you just don't want to wait for the next scheduled backup – but who wants to start a manual backup every time? The solution is the Microsoft Office Backup Now! Plugin, which enables you to back up your important documents right from the application. The plugin installs an icon in your toolbar that you can use to back up your document whenever – and however often – you want, protecting you from the devastation of losing your work if your computer crashes.
